

## **Programmable Thermostats Meeting at FCC on January 16<sup>th</sup> at 6:00 pm**

Switching to energy efficient light bulbs isn't the only bright idea in Manchester these days. As a continuation of the Manchester Challenge's goal to move the town toward renewable energy, the use of programmable thermostats will be discussed at First Congregational Church of Manchester on January 16<sup>th</sup> at 6:00 pm.

This meeting, open to the public, will explore ways the First Congregational Church and individual homes can become more energy efficient, especially in the use of heating oil during the winter.

Previous energy-saving initiatives in Manchester have included the campaign to switch to fluorescent bulbs screenings of the documentary *An Inconvenient Truth* at the First Congregational Church and at Israel Congregation.

First Congregational Church is located in Manchester Village across from the Equinox Resort. For more information about this and future events contact Beverly at the FCC office: 362-2709 or [fstcongo@adelphia.net](mailto:fstcongo@adelphia.net).
